Aluminum PENICILLIN
Oral Tablets

Greater effectiveness by the ORAL ROUTE

Oral therapy with Aluminum Penicillin has proved to be highly effective in a variety of penicillin-susceptible infections.

Aluminum Penicillin rarely causes gastro-intestinal disturbance or allergic reactions.

Unique advantages are that Aluminum Penicillin is not soluble in solutions of the acidity of gastric secretion but is readily absorbed from the intestinal tract. Sodium benzoate is added because it inhibits the destructive action of penicillinase.

These factors provide for maximum utilization of the drug, higher and more prolonged blood levels.

Supplied in vials of 12 tablets each containing Aluminum Penicillin 50,000 units, Sodium Benzoate 0.3 gram.
